

Description

The GM7800 series are classic regulators, which are useful in a wide range of applications. For example, they can be used for local on-card regulation to eliminate the distribution and problems associated with single point regulation.

The wide range of output voltages (5V to 27V) make this series versatile in most applications. Although the 7800 series is designed as fixed output voltage regulators, they can be used as adjustable output voltage options by a few external components.

These virtually indestructible positive voltage regulators are protected by thermal shut down and internal current limiting. Most applications require no external components.

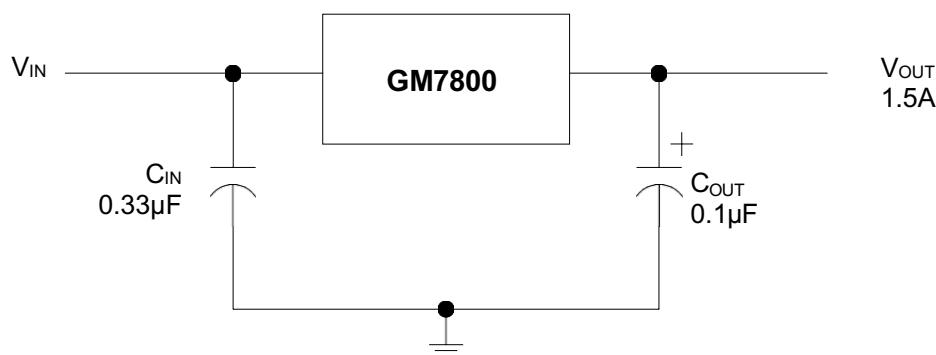

Current limiting prevents the peak output current to a safe value. Safe area protection of the output transistor limits in thermal power dissipation. In case of internal power dissipation becomes too high for the heat sinking provided the thermal shut down circuit will activate to prevent the regulators from overheating.

The GM7800 series are available in TO-220, TO-252, TO-263 packages.

Features

- Output current up to 1.5A
- Output Voltages 5V, 6V, 8V, 9V, 10V, 12V, 15V, 18V, 20V, 24V and 27V
- 3-Terminal Regulators
- Internal Thermal Overload Protection
- Internal Short-Circuit Current Limiting
- Output Transistor Safe-Area Protection
- TO-220, TO-252 and TO-263 Packages
- High Power Dissipation Capability
- Direct replacement for LM78xx series

Typical Application Circuit

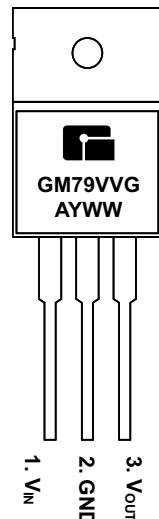

For a positive regulator, a $0.33\mu F$ bypass capacitor should be used on the input terminals. While not necessary for stability, an output capacitor of $0.1\mu F$ may be used to improve the transient response of the regulator. These capacitors should be on or as near as possible to the regulator terminals.
